Abstracts

The global civil helicopter market has grown almost three fold in size over the past decade; despite the global economic crisis; driven by an expansion of the degree as well as scope of utilization of civil helicopters across a range of user segments led by the offshore oil & gas exploration sector and law enforcement & parapublic based applications. Further, the imminent, radical generational leap in technology; with the development & commercialization of tiltrotorcrafts & compound helicopters for the civil segment by the industry; is likely to transform the market landscape significantly over medium term with the role played traditionally by civil helicopters likely to be redefined with a significant expansion of the operational spectrum, capabilities & performance threshold. The AW609, especially, has tremendous potential for the offshore oil & gas transportation, search & rescue and executive transport applications.

The global civil helicopter market is dominated by the European OEMs which together hold over 60% market share with their broad & well diversified product portfolios and strong, traditional focus on & deep presence across international & emerging markets. The emerging shift in global market dynamics with a rapid projected growth in civil helicopter fleets across emerging markets, led by China, thus, positions them favorably and is likely to be leveraged effectively over medium term.
