Abstracts

The Global Agriculture Equipment market has been doing well amid logistical, supply chain and labor force disruptions caused by the pandemic while also facing semi-conductor chip shortages & rising input as well as material costs causing the demand to outpace supply across many key product segments. The industry also continues to make steady progress towards development of a range of sustainable technologies geared towards de-carbonization of agriculture over long term while continuing the development of innovative services & business models configured on connectivity & autonomy. However, uncertainty over the likely direction of the pandemic & rising inflation levels necessitating monetary policy tightening are likely to be a concern for the industry.

The demand for agriculture equipment in a marked upswing phase powered by higher agriculture commodity prices & favorable farm economics across most key markets with net farm incomes in the U.S. growing by almost 25% year-on-year for 2021 with above average forecasts for farm sector profits for 2022 with global economy striving to make a comeback from the COVID-19 pandemic. The net cash receipts from the sale of agricultural commodities are also likely to grow by almost 7% for 2022. However, a decrease in direct government payout over COVID-19 relief in 2022 and an increase in production expenses are likely to impact & partially offset the same. Overall, demand for agriculture equipment is projected to maintain its overall growth momentum across most key global markets in 2022.

Against this backdrop, the 2022 edition of the report analyses the overall strategy focus and provides insights into & comprehensive analysis of the Strategies & Plans being conceptualized & pursued by the World's Top 6 agriculture equipment manufacturers for the near to medium term horizon.
