Abstracts

Healthcare robotics is a nascent but growing market with huge scope in the future. The complex and critical surgeries are being performed through robotic technologies such as minimally invasive surgeries. Such technique enables surgeons to perform various critical surgeries such as the prostate cancer, brain tumor, artery bypass, valve repair and replacement, arterial fibrillation amongst others. The surgeries are performed with minimal incision to avoid scars and blood loss. The recovery of patients is faster with less amount of pain compared to open surgeries. Robots were used in nearly half a million surgeries in the US in 2013 a rise of 15% over 2012. The global robotics market is estimated to be \$6500 million by the year 2021.
