Physical Identity and Access Management Technology is a solution that works in identity management, it also dispartate automating processes, physical security systems, and simplifying control of vendors, employees and other identities. PIAM software allows organization to manage the “life cycle” of identities as they relate to physical access; it includes synchronization of on/off-boarding across all systems harboring an identity record, access zone and profile management, and role-based physical access. These unified software systems can better meet the dual challenge of access control and identity verification by centralizing all identity information across relevant systems while applying rules based conformance. Deployment of Physical identity and access management (PIAM) is increasing because of the development of technology and product, compliance mandates, a greater desire has developed to manage alternative user populations such as contractors and on-premises visitors, and a sharp emphasis is done on timely and secure access.
