Abstracts

The roofing chemicals are widely used in the roofing of industrial, residential, commercial, and infrastructure projects. With the help of roofing chemicals, the durability, strength, and resistance of roof can be improved. Also, the chemicals maintain the color, reduce chemical and water usage and improve resistance for adverse climatic conditions. There is a high demand of metal roofing followed by elastomeric, membrane, plastic and bituminous, roofing. The chemicals such as acrylic resin, asphalt, elastomer, epoxy resin, and styrene are important chemicals. The demand in developing countries is the key factor of high growth of roofing chemicals market. In any country economic development is also a key factor which creates high growth opportunity for roofing chemicals. The infrastructure includes industrial as well as urban growth of economy. One of the key drivers from application segment is metal roofing, further the market is driving globally due to increasing cost of conventional feedstock for chemicals. Roofing chemicals manufacturers in developed regions like North America and Europe follow strict government policies while developing chemicals. The government policies in developing regions are strict as compared to the developed countries. The opportunities in developing countries are higher for this market. In developed regions like Europe, government has imposed many strict rules over the manufacturers which results in producing renewable chemicals. The raw materials used for roofing chemicals are naphtha, asphalt, crude oil etc. It expected that the metal roofing will lead the roofing chemicals market by application; followed by membrane roofing plastic roofing and bitumen roofing, in terms of value.
