Abstracts

The Alzheimer'S Drugs Market is valued at USD 8.4 billion in 2025 and is projected to grow at a CAGR of 9.3% to reach USD 18.7 billion by 2034. The Alzheimer's Drugs Market is a key segment of the broader Alzheimer's disease treatment industry, focusing on pharmaceutical solutions to manage symptoms and slow disease progression. Current drugs include cholinesterase inhibitors and NMDA receptor antagonists, which provide symptomatic relief but do not cure the disease. The market is witnessing increased investment in novel drug development, including amyloid-targeting and tau-based therapies. Recent approvals of monoclonal antibody therapies, such as anti-amyloid drugs, have generated excitement in the market. These drugs aim to slow cognitive decline by reducing amyloid plaque accumulation in the brain. Additionally, drug repurposing efforts and advancements in personalized medicine are helping identify more effective treatment combinations. Pharmaceutical companies are also exploring gene therapy and RNA-based treatments as potential breakthroughs. The Alzheimer's drugs market is expected to expand with the introduction of more targeted and personalized treatments. However, challenges such as high drug prices, reimbursement barriers, and clinical trial failures continue to hinder progress. Addressing these issues through regulatory support, public-private partnerships, and continued innovation will be crucial for future market growth.
