## **Abstracts**

The Automated Machine Learning Solution Market is valued at USD 3.8 billion in 2025 and is projected to grow at a CAGR of 37.9% to reach USD 68.6 billion by 2034.

### Automated Machine Learning Solution Market

The automated machine learning (AutoML) solution market is rapidly gaining prominence as organizations across industries seek to democratize access to machine learning capabilities. AutoML platforms simplify the process of developing and deploying machine learning models by automating tasks such as data preprocessing, feature engineering, model selection, training, and tuning. These solutions enable business analysts, domain experts, and non-technical users to extract insights and build predictive models without requiring deep expertise in data science. The AutoML market expanded significantly due to increased demand for scalable AI applications across sectors like finance, healthcare, retail, and manufacturing. Vendors enhanced platform capabilities by integrating natural language processing (NLP), time-series forecasting, and explainable AI (XAI) features. Cloud-based AutoML solutions gained popularity for their scalability, while partnerships between AutoML providers and cloud service giants like AWS, Google Cloud, and Microsoft Azure enabled faster enterprise adoption. The market is expected to continue its strong growth trajectory, driven by the proliferation of data and the need for real-time analytics. AutoML tools will increasingly be embedded in business intelligence platforms, ERP systems, and customer engagement tools. Advancements in generative AI and federated learning will further enhance AutoML platforms. However, challenges related to data governance, model transparency, and

over-reliance on automation without human oversight could limit full-scale deployment in regulated industries.

## Key Insights Automated Machine Learning Solution Market

Integration of AutoML with low-code/no-code platforms for faster deployment.

Expansion of AutoML use in edge computing and IoT data processing.

Growth in demand for explainable AI (XAI) and model interpretability features.

Increased use of AutoML in real-time applications like fraud detection and predictive maintenance.
