## **Abstracts**

The global dimethyl terephthalate (DMT) and terephthalic acid (TPA) market is experiencing robust growth, driven by the ever-increasing demand for polyethylene terephthalate (PET) plastics. Both DMT and TPA serve as crucial intermediates in PET production, a versatile polymer widely used in packaging, particularly for bottled water, carbonated soft drinks, and other beverages. In 2024, the market witnessed a surge in demand for DMT and TPA as the bottled water industry continued its global expansion, fueled by consumer preferences for healthier beverage options and growing concerns about water quality.

Moving into 2025, the DMT and TPA market is projected to maintain its positive trajectory. The rising global population, increasing disposable incomes, and the continuing shift towards packaged beverages will further drive the demand for PET bottles and, consequently, DMT and TPA. Additionally, the growing adoption of PET in other applications, such as food packaging, clothing fibers, and films, will contribute to market growth. However, the industry faces challenges related to the volatility of raw material prices and increasing pressure to adopt sustainable production practices and enhance recycling rates.
