The global dioctyl maleate (DOM) market is witnessing steady growth, driven by the compound's widespread use as a versatile plasticizer in polyvinyl chloride (PVC) applications. DOM, a diester of maleic acid, is highly valued for its ability to impart flexibility, durability, and low-temperature properties to PVC products. In 2024, the market experienced an upsurge in demand for DOM, fueled by the expanding construction industry, particularly in developing economies, where PVC is extensively used in flooring, pipes, and window profiles.

Moving into 2025, the dioctyl maleate market is projected to maintain its positive growth trajectory. The increasing adoption of PVC in automotive interiors, medical devices, and packaging applications will be a key growth driver. Additionally, the rising demand for eco-friendly plasticizers, with DOM offering a less hazardous alternative to certain phthalate plasticizers, will further contribute to market expansion. However, the industry must navigate challenges related to the fluctuating cost of raw materials and the ongoing development of bio-based plasticizers that could potentially compete with DOM.
