Abstracts

Global oil and gas supply demand outlook report from OG Analysis provides detailed outlook of global, regional and country wise forecasts to 2025. Amid OPEC decision to curtail output, US production growth, changing dynamics of emerging economies like China and India, the report provides detailed analysis and outlook into global oil and gas markets. In addition to production from existing fields, over the long term, deepwater exploration areas will witness strong growth, driving the upstream investment upwards.

With plans to increase natural gas role in energy mix and increasing shift towards floating LNG terminals, markets consuming natural gas are set to increase. In particular, demand from developing countries will account for significant amount of increase in demand. On the other hand, low oil prices continue to challenge rapid growth of natural gas.

Further, the report also focuses on planned capital expenditures of leading 10 companies to provide insights into the future of global oil and gas market investments and new areas of development.
