## **Abstracts**

OGAnalysis's widely renowned study on Turkmenistan refining industry (2016) focuses on the emergence of gasoline, diesel, fuel oil and LPG supply/demand balances in near to long term future. As lower crude prices continue to cause delays and cancellations of refinery projects worldwide, the research work analyzes the progress of refining projects, investment environment, plant closures, margins and pricing trends in Turkmenistan.

With refiners worldwide focusing on expanding capacities in demand centers, the report evaluates the drivers and challenges of operating and investing in Turkmenistan refining industry. The report observes that the Turkmenistan refining capacity (CDU) is expected to increase by 17.8 % over the next five years.

Turkmenneftegaz dominates the refining industry in Turkmenistan, with the highest market share in the country.

The Turkmenistan refining report provides refinery wise CDU, coking, FCC and Hydrocracking capacity outlook along with details of all operational and planned refineries including location, startup, current status, companies and capex details.

Crude oil demand from refineries and production from fields are forecast to 2025 along with gasoline, diesel, fuel oil and LPG annually to 2025. Importance of each of the petroleum products along with current consumption mix, major consuming sectors for each product are provided. Companies in Turkmenistan continue to target increased

production of middle and light distillates amidst low crude prices.

The report also reviews emergence of refining capacity amidst current framework of estimated refining margins and products prices. Further, business profiles of three leading refiners along with their SWOT, Financial and business description are included. In addition, all latest news and industry developments are analyzed in the research work.
