Abstracts

The Artificial Photosynthesis is a process that converts and stores the energy from sunlight in the chemical bonds of a fuel. It replicates the natural process of photosynthesis. It could offer faster and efficient production of Hydrogen on large scale which could accelerate the use of fuel cell vehicles. The research for artificial photosynthesis is driven by factors such as increasing demand for green technology and initiatives for sustainable development. In addition, solar energy can be stored and converted into fuel making the technology economic and efficient. Factors such as rising application of artificial photosynthesis, technological development, and increasing funding and investment in artificial photosynthesis creates the future opportunity for commercialization. However, involvement of high cost of the technology act as the barrier for the artificial photosynthesis market.

The major companies contributing to the global market are Siemens AG, Evonik Industries AG, Toshiba Corporation, Panasonic Corporation, Toyota Central R&D Labs, Inc., Sun Catalytix, Mongoose Energy LLC, Fujitsu Laboratories Ltd., Hyper Solar Inc, BIOeCON, Future Carbon GmbH, BERKELERY LAB, and Carbon Solutions Inc.
