## Abstracts

Automated pipetting system is a device designed to performs automatic pipetting of liquid via software between selected groups of containers. It is a laboratory manual tool, which is commonly used in various fields such as molecular biology, analytical chemistry, and medical tests, to transport a measured volume of liquid. It is one of the growing markets in the laboratory and diagnostics sectors. Factors motivating the growth of this market includes its high accuracy, productivity and easy handling system. In addition, multiple application enables in replacing manual pipetting system across various end users such as biotechnological companies, hospital, research laboratories and diagnosis centres. However, its high price, maintenance cost and lack of skilled professionals may restrict the growth of this market. Continuous improvement by leading market players in automated pipetting system devices has increased its uses in proteomics and genomics. Further, wide use of automated pipetting system in various application such as DNA/RNA purification, next generation sequencing has brought new opportunity to this market

Geographically automated pipetting system market is divided into north America, Europe, Asia pacific and rest of the world. North America region represents considerably a largest market for automated pipetting system in terms of its uses and revenue generation. It is due to rising prevalence of chronic disease and increasing spending in biotechnological field such as proteomics and genomics. Developing nations that are experiencing impressive growth in their economy over the past few years such as India, china, brazil, Mexico and South Africa have a great potential for automated pipetting system market. Europe is expected to have a lucrative growth in this market.

The global players in the automated pipetting system market includes Agilent

technologies, Analytik jena AG, Danaher Co., Eppendorf AG. The strategy adopted by leading players is continuous investments in R&D which made them progress over the past several years in producing better automated pipetting systems. Continuous improvement on automated pipetting system sensors helps market player to offers high-value product and services. In May 2017 Eppendorf AG launched its Innova S44i which is mainly developed for laboratories that are short on space but have high demands for sample cultivation.
