### MARKET INSIGHTS:

Global Biosimulation Market is expected to exceed \$2.2 billion in 2020 with a CAGR 15.5% during 2015-2020. Rise in adoption of drug discovery and development and success in precision dosing are expected to boost global Biosimulation market. Biosimulation applications such as preclinical testing, clinical trials, target identification and validation, lead identification and optimization are widely adopted. These applications enable to provide faster and more certain results compared to conventional techniques as a result it is widely adopted across the globe. The technological advancement and innovation in Biosimulation products and applications enable to reduce the number of clinical studies for drug development. Model-based drug development reduce the clinical studies and offer better results. Biosimulation has huge contribution in personalized medicines which are adopted widely for better patient care. Due to the advancement in biosimulation the traditional one size fits all concept is replaced by personalized medicines. Biosimulation models enable to find better protection against various diseases such as tumor and other cancer cases through precise dosing. As a result it saves time, effort and money for drug development for many diseases.

Biosimulation technology offers virtual clinical trial population for pediatric, elderly and other group of patients. It enables to perform better clinical trials and reduce the time and effort for drug discovery and development. Technological advancement and innovation in biosimulation market enables to penetrate in emerging economies such as China, India, Japan and Korea. Biosimulation market by application such as preclinical testing, clinical trials, target identification and validation, lead identification and optimization are enhanced through research and development. Biosimulation market by

product includes Pharmacokinetic/Pharmacodynamic (PK/PD), Molecular Modelling, Toxicity Prediction Software. These products enable to avoid drug-drug interaction studies, evaluating, genetic differences, predicting human doses and handling of drugs.
