Market Insights:

The Global Cell Culture Market is expected to grow at a CAGR of 10.01 % during 2017-2022. Cell culture is the process by which cells are grown under controlled conditions, generally outside of their natural environment. Biotechnology has acquired a major importance of any research & development activities for new healthcare applications as well as biological applications, living tissues & cells, stem cell applications in vitro fertilization & in vivo fertilization. Due to this center of all research related activities is biotechnology. Thus, the cell culture and its application in the field of molecular biological research and development activities are expected to remain growth factors. With the introduction of genomic as well as proteomic shaping, rDNA technique, genetic engineering, and the cell culture technology have become an essential tool. Use of cell cultures has amplified to an extent to that level where to fulfill the demands of productions conventional manual small scale production and handling of cultures is no longer enough.
