Market Insights:

The Global disposable medical sensor market is expected to grow at a CAGR of 10.5 % during 2017-2022. The portable scanning devices intended for diagnosis, patient monitoring and therapeutic processes is known as Disposable medical sensors. Disposable medical sensors are designed to detect and provide information in the form of electrical signals by converting patient's various forms of stimulations. Disposable medical sensors facilitate continuous patient monitoring through the measurement of basic vital signs, for instance breathing rate, blood oxygenation level, heart rate, pulse rate and temperature. Disposable medical sensors are used in different specialties such as general medicine, neurology, ophthalmology, urology, cardiology, radiology, and so on.

Disposable medical sensors is growing at a very fast pace owing to acute myocardial infarction and diabetes mellitus particularly in geriatric population, increasing number of postoperative rehabilitation patients, increasing incidence of chronic diseases such as cancer, technological advancements and increasing innovations in the development of point of care medical sensors for diagnosis and monitoring outside hospitals this all act as a motivators in the growth of global disposable medical sensors market. On the other hand stringent regulatory procedures and lack of adequate reimbursement policies for novel technologies are the major factors that can acts as a barrier in the growth of global disposable medical sensors market in the next five years. However increasing the need of remote patient monitoring and next generation disposable medical sensors such as wearable wrist watches, painless diabetes monitors, etc. are other opportunities to manufacturers.

Geographical Insights

Geographically market is divided into North America, Europe, Asia-Pacific and Rest of the World. North America is having the highest market share owing to increasing demand for medical sensors and the improved health care infrastructure in the region. Apart from that, technological advancements in medical device sensor technology have pushed North American region upward. U.S is the major country in this region, which is followed by Canada. Asia Pacific is growing at the fastest rate in forecasted period. The major reason for the growth of this region is rising awareness about therapeutic applications of medical sensors, rising demographics and economies in the developing countries, such as India and China, are anticipated to lead to the growth of the Asia-Pacific region. Japan, China and India are the major countries in this region. France, U.K, and Germany are having highest market share of the Europe region.
