Abstracts

The global fluoroscopy system market is expected to grow modestly during the forecast period (2018-2023). The fluoroscopic market is Influenced by many important factors which includes increased cost-efficiency, increasing number of orthopedic surgeries & angiography, real-time injury assessment, reduced radiation risks, higher visibility during surgical procedures and quick recovery, efficacy. The cost efficiency in the fluoroscopy system has played important role in driving its growth in the market. It has influenced the physicians as well as patients for the treatment. Growing number of orthopedic surgeries & angiography has resulted in increased use of fluoroscopy systems. The fluoroscopy system also helps in real-time injury assessment in athletes and others as it provides real-time moving images of internal structure of the patient which expands the use of fluoroscopy systems in the industry. In addition, the system improves the visibility for the surgeon during the surgery and helps in improved surgery. The fluoroscopy system has wide range of applications such as traumatology, orthopedics, vascular surgery and others which maximizes its use and helps in serving vast market. It needs small invasive which decreases the recovery duration of the patient and reduced stay in hospital.

The fluoroscopy system market is positively influenced by various aspect; however, beside these there are certain factors which limits its growth. The under-developed health infrastructure in many countries still restricts them in excessing basic health facilities in the nation. The fluoroscopy system reduces the radiation risks at a certain level although, there is still a chance of skin injury and other effect of radiation.

Global fluoroscopy system market can be segmented on the basis of end-use, application and product. Based on the end-use, the market is diversified as hospitals and diagnostic centres. On the basis of application, the market is further bifurcated as

orthopedic, cardiovascular, pain management and trauma, neurology, gastrointestinal, urology and general surgery. According to the product, the market is further sub-divided as fluoroscopy devices and C-arms. Among the applications, the market is expected to be dominated by cardiovascular segment owing to increasing prevalence of cardiovascular diseases which is expected to fuel the demand for highly efficient diagnostic imaging tools. Furthermore, among the end-use, the hospital segment is expected to hold the largest share as improved infrastructure facilitates successful surgeries that mandates the use of fluoroscopy devices in the hospital.

The market is geographically analyzed into four regions: North America, Europe, Asia-Pacific and Rest of the world. The North-America has the largest market share of fluoroscopy systems in the global market due to several factors such as large amount of research & development activities continuing in the US which is ultimately contributing in the growth of North-American market. High frequency of chronic diseases and increasing preference of minimal invasive techniques surgeries also contribute in the market growth. Furthermore, increasing Importance of healthcare in major economies such as India and China are allowing the Asia-Pacific region to grow quickly and is also one of the fastest growing regions in the world.

The companies contributing in the global fluoroscopy system market includes GE Healthcare, Philips Healthcare, Siemens Healthineers, Varian Medical Systems, Hologic Incorporation, Fujifilm Holding, Shimadzu Corporation, Toshiba Medical Systems, Block Imaging International, OrthoScan Incorporation and many more. The market consists of high competition between companies which are coming up with improved technology, innovation and new products more frequently. Companies prevailing in the market are looking for greater expansion and market share in the industry.
