MARKET INSIGHTS

Global injectable drug delivery market is expected to grow at a CAGR of 10% for the forecasted period of 2016-2021. Some of the top selling drugs are delivered using injections and implants. Drugs delivered using injections are considered to act more effectively and for longer duration compared to the orally administered drugs. The market for injectable drug delivery is segmented on the basis of mode of administration, by usability, by type and by therapeutic applications. The injectable drug delivery market is delivered by various factors. One of the major factors driving the market is rising prevalence and incidence of chronic diseases such as diabetes, hormonal disorder, reproductive health issue and other major diseases. The market is also driven technological advancement, innovations and ongoing R&Ds. The growth of self-injections is very high. The market is overtaking the conventional drug delivery market. It is also driving the market to grow.

Regionally, North America has the highest market share. The market is driven by high awareness, availability of reimbursement, high use of self-injectors and other major factors are driving the North American market. Europe is the second largest market segment. Asia Pacific is the fastest growing market. It is driven by high population suffering from chronic diseases and improving healthcare system.
