Abstracts

The myocardial infarction or heart attack is a life-threatening condition that occurs due to the blockage of one or more coronary arteries and the blockage in the blood flow to the heart muscle. There are various death cases recorded due to severe heart stroke or heart attacks. The myocardial infarction is of three type which are STEMI heart attacks, NSTEMI heart attacks, and silent heart attacks. Such diseases can be diagnosed by electrocardiography, chest x-ray, CT scan, echocardiography, blood test, and another diagnostic test. Moreover, the heart attack can be treated by several medications such as aspirin thrombolytic, antiplatelet agents, and others medicines and some surgical procedures such as angioplasty bypass surgery, heart transplant, and so on. Some of the devices used for the treatment of myocardial infarction includes left ventricular assist devices, pacemaker, and implantable cardioverter defibrillator.

Factors contributing to the growth of the myocardial infarction market includes rising incidence rate of CVDs (cardiovascular diseases) and intake of high-level sugary food, which significantly boost the prevalence of CADs (coronary artery diseases). Moreover, the shift towards sedentary lifestyle and faulty dietary habits coupled with lack of physical activities are some other factors that fuel the growth of the market. The high cost of myocardial infarction treatment and delay in certification for heart treatment are some factors restraining the growth of the market. However, the supportive laws and schemes for the reduction and prevention of heart diseases and the rising adoption of minimally invasive treatment are anticipated to create the future opportunity for the growth of the myocardial infarction market.

Geographically market is divided into North America, Europe, Asia-Pacific, and Rest of the World. North America holds a dominant position in the global myocardial infarction treatment market due to the increasing demand for emerging technologies and the

affordability of such treatment in the US. However, Europe is the second largest market for myocardial infarction treatment across the globe, owing to favorable reimbursement policies and supportive laws and schemes for healthcare technology are some of the major factors fuelling the growth of the market in the region. The lack of physical activities and improvement in healthcare infrastructure which are leading to higher cholesterol and risk of stroke are some factors anticipated to drive the growth of myocardial infarction treatment market in Asia-Pacific.

Major players contributing into the growth of the global myocardial infarction treatment market includes AstraZeneca PLC, BioVascular, Inc., Merck KGaA, Johnson & Johnson Services, Inc., Pfizer Inc., Novartis AG, GlaxoSmithKline PLC, Portola Pharmaceuticals, Inc., and Teva Pharmaceuticals Industries Ltd, among others. The companies are working on developing innovative myocardial infarction treatment system through research and innovation, expansion, merger& acquisition, finding a new market or innovate in their core competency in order to expand individual market share.
