Abstracts

Non-rechargeable batteries cannot be charged and are used once and then is discarded. These batteries are known as primary batteries in which the process of powering the device is not reversible. The chemical reaction producing electricity can only be gone through one process, which once finished, the battery is discarded. Non-rechargeable batteries are used in alarm clocks, smoke detectors, watches, smoke detectors, in military applications, and so on. The growth of the non-rechargeable battery is expected to show a hike due to high energy density offered by non-rechargeable batteries in low initial cost. In addition, increasing demand for portable medical devices such as portable EKG, and the hearing aid is also contributing to the growth of the market. However, the cost of the battery in the long-period is high. In addition, the presence of a rechargeable battery in the market results in retarding the growth of the market. Furthermore, environmental and health hazards due to these batteries have a negative impact on the growth of the market. Moreover, applications of non-rechargeable battery in IoT will be responsible for the future growth of the market.

The global non-rechargeable battery market is geographically analyzed on the basis of North America, Europe, Asia-Pacific, and Rest of the world.
