### Market Insights:

The Global Video Analytics Market Is Expected To Grow At A CAGR Of 36.08% During 2017-2022. Video analytics is the capability of automatically analyzing video to detect and determine temporal and spatial events. The rising demand for improved security arrangements will boost the growth prospects for the video analytics market in the forecasted year. It has been observed that the frequency, and intensity of security breaches and number of terrorist attacks is increasing at a high rate including incidences of shoplifting, robbery and theft. This results in stringent regulations to control anti-social activities by the government of countries such as US and UK which, in turn, fuels the rate of adoption of video analytics solutions in the market. Likewise, the market is witnessing a high demand for the installation of video surveillance cameras in public places like airports, railway stations, hotels, hypermarkets, hospitals, and shopping malls across the world. Additionally, video analytics-enabled cameras have the capability to automatically report suspicious events and provide real-time alerts and forensic tools for staffed and unstaffed camera video surveillance options.

The increasing adoption of SaaS-based video analytics will motivate the growth prospects for the global video analytics market in the forecasted year. Rising adoption of SAAS based intelligent video analytics over on premise analytics is its lower cost.
