## Abstracts

License Price: US\$ 4,740.00

### Introduction

For most countries, a country-wide data interchange for healthcare still seems some time away. Can it be achieved without having established a consistent data interchange in place on a local basis? Is the actual level of connection between medical care-givers in a region an indication of how quickly a nationwide data exchange can take place?

### Features and benefits

Insights on healthcare CIOs' investment priorities for 2010/2011 based on Ovum research

Examples of medical data interchanges on a nationwide basis (NL, Sweden) and of governments' provisions that require exchange of data (UK, Germany)

### Highlights

Given the large number of competing IT solutions on the market, the need to share data seems daunting and at the same time more necessary than ever. Ovum thinks that it takes a certain level of maturity in the use of healthcare IT before electronic health record (EHR) systems will be deployed on a country-wide base.

### Your key questions answered

To improve patient welfare, patient information needs to be pulled together from multiple sources

Readiness to engage in large-scale, nationwide data exchanges programs depends on overall level of healthcare IT deployment

## Contents

### **SUMMARY**

Catalyst  
Ovum view  
Key messages

### **DATA SHARING IS AT THE CORE OF PATIENT WELFARE**

The push for information exchange  
It's a long way to a nationwide exchange of health information  
Reality check: investment priorities in 2010/2011

### **A SNAPSHOT OF DATA EXCHANGE IN ACTION**

The Dutch showcase  
Sweden is implementing a nationwide EHR system  
The impact of "meaningful use" in the US  
The UK's NHS started out in a grand way  
Germany's protracted route to more efficient healthcare delivery

### **RECOMMENDATIONS**

Recommendations for enterprises  
Make the most of your IT investment - keep it interoperable  
Recommendations for vendors  
Support interoperability
