Abstracts

Introduction

RSA provides an extensive range of IAM-based identity assurance products and services which collectively, as well as individually, can be deployed to protect the operational systems and intellectual property of public and private sector organizations and their users.

Features and benefits

Credential management provides a full lifecycle management and policy administration environment for user credentials.

Authentication facilities assure identities to a system, resource, or transaction, and are delivered based on the risks involved.

Contextual authorization enforces access based on a specific risk and business context according to the policy requirements of each organization.

Highlights

The company’s identity assurance products have been designed to minimize the risks associated with inappropriate and unauthorized systems and account usage, and its services have been extended to address fraudulent activity, accidental data leakage, and information and event monitoringThe RSA solution has the ability to deal with business-specific identity assurance issues. This is achieved by combining the essential elements of credential management, authentication, and contextual authorization with an integrated Intelligence layer that actively addresses access control, activity
