Abstracts

This is the second of two reports that present the combined thinking of the Ovum telecoms research group on the subject of what the telecoms industry will look like in the year 2020. This report summarises the key findings and conclusions of our individual practice reports, which map out developments in specific areas, ranging from consumer, enterprise and wholesale telecoms through to network infrastructure and regulation.

Contents

Executive summary
In a nutshell
Ovum view
Scope
Structure of this report
Drivers of change
Five key drivers of change
Consumer trends
Consumer segmentation
SMART versus LEAN
Two new major categories of players
A converged model over time
Smart enablers are an early step on both paths
The rise and rise of broadband
Broadband as the fourth utility
Tiering of broadband offerings will become increasingly common
The development of broadband networks underpins quality of experience
The decade of video
Video will dominate the next ten years
Video will migrate to IP networks
Advertising will continue to fund much consumption of content
The decline of voice
Content and advertising
The content ecosystem in 2020
SMART players gun for content and a seamless user experience
Revenues: expanding content 'currencies' and business models
Defining trends
More specialist devices are on the way
Brace yourself for the consumer of the future
Search and discovery will take centre stage
New wave of interactivity will impact applications and the device user interface
Fully immersive environments are still a long way off
Not everything will be in the cloud
Building online trust will become critical
Devices and platforms
Evolved web access will become ubiquitous across devices
Pervasive web will drive innovation into the cloud

Focus will shift away from solving device-side problems of application development

OEMs will refocus on creating unique user experiences

Vertical integration of devices, software and services makes sense in the short term...

... and will continue to deliver benefits through 2015 and beyond

Horizontal service integration will predominate by 2020

Horizontally integrating cloud assets will be key in the longer term

Managed developer platforms and platform-as-a-service (PaaS)

Devices and platforms: industry structure and player positioning

Embracing MDP realities will be the key to SMARTness

Brand power will still dictate MDP success

Enterprise trends

Customer segmentation

Enterprise end users are consumers

The enterprise CIO is in control

A world of IP-enabled applications

Ubiquitous IP connectivity

Communications functionality delivered through software, not hardware

Richer, more integrated communications

On-demand, cloud and virtual computing transform pricing

The network as a service hub

Complexity requires management

Telcos must focus on management capabilities

Revenue shift

Wholesale trends

The increasing importance of wholesale

Growth in the number and size of wholesale services

Increasing variety among wholesale players

Greatly increased demand for bandwidth and storage

This doesn't necessarily make it a pleasant market

Change required by wholesalers

Improved targeting of wholesale services

Greater focus on efficiency and return on investment

Consolidation of commodity service providers

The rise of 'intelligent plumbing' – LEAN operators

Telco revenue trends

Composition of telco revenues will change by 2020

Telco operations and strategy

A change in structure and business orientation required

Greater operational efficiency to maintain margins

Dealing with the changing business model
Consolidation will reduce the number of network operators
Emerging markets
Economic growth a key change driver
Customer segmentation
Consumers in the same groups as in mature markets
Business segmentation
Explosion of data traffic; voice still cash cow
SMART vendor role emerging
Wireless-led networks
Network infrastructure
Telcos will pass on the pressure they feel to vendors
A move to full-service vendors and specialised vendors
A shift to software, but hardware still matters
Meeting the 'multi-terabit challenge' will require significant industry R&D and cooperation on standards
The network demarcation point is very likely to move into the connected home and office
Increasingly intelligent networks
Recommendations for vendors
Components
Need for new enablers of performance improvements
Innovation required to move hotspot components onto different curves; cannot rely on Moore's Law
Multiple hotspots span core and access networks
Industry structure generally in good shape but needs to slim down in FTTx
Regulation
Continued regulation of termination rates
Increased symmetry between rates
Long-term move to capacity-based charging and bill and keep
Slower progress in emerging markets
Universal service expansion
Universal service obligations will increasingly include broadband
Government encouragement for network sharing
Net neutrality regulations introduced
The US will lead the way
Transparency will be the key principle
Market analysis evolving
More analysis based on sub-national geographic markets

Spectrum policy
Deployment of digital dividend spectrum
Deployment of unlicensed spectrum
Coordinated approaches
