-----	---------------

More and more voice traffic is migrating from traditional time division multiplexing (TDM) technologies to a multiplicity of different VoIP implementations. Efficient and secure interconnection of these services is essential to providing a voice service with universal reach, but carriers are simply trying to reproduce TDM interconnection models for VoIP. Players must use this opportunity to choose a new interconnection model that enables service and charging innovation rather than stifling it.

### Table of Content

Executive summary

In a nutshell

Ovum view

Key messages

Voice margins will continue to fall

Migration from TDM to VoIP continues

Two-tier VoIP is inevitable

Interconnection is essential but not simple

Moving from bilaterals to hubbing

Risk that IPX could create a private club

End of the minute is approaching

Recommendations for players

International wholesale voice carriers: get bigger, get focused or get out

Fixed and mobile retail voice service providers must prepare for the inevitable

Providers of VoIP interconnection solutions must keep their customers' options open

Regulators must get off the fence

Voice is changing

Voice traffic continues to grow

Fixed-to-mobile substitution

Falling margins

End-user VoIP

IP voice in the backbone

Benefits and challenges of migrating to VoIP

Benefits of VoIP

Greater efficiency, lower costs

IP enables faster innovation

Additional capabilities of VoIP

Challenges of VoIP

Security

Quality

VoIP variants

Interoperability

Number portability and ENUM

Peering and transit

Charging
