Abstracts

With job creation showing signs of accelerating at the beginning of 2012, there is a renewed sense that business expansion will once again breathe life into the U.S. economy. And, with speculation that international economies may experience slower growth or even mild recession, now is the time for card issuers and marketers to double-down on the \$730 billion U.S. commercial and small business card market.

While the need by many issuers to be somewhat risk averse may remain, small business card issuers and marketers that find a balance between risk management and aggressive promotion will be richly rewarded once the U.S. economy is expanding at full speed. At the same time, an extraordinary opportunity exists for commercial card issuers, particularly for purchasing cards, to capture the \$21 trillion automated clearing house (ACH) universe of commercial electronic payments.

Several trends will be at the forefront over the next few years as commercial card issuers and marketers jockey for position in an increasingly competitive landscape. Analytical tools for the card issuers and the card program managers will become more robust and flexible as risk management and fraud detection become increasingly important.

The growing interest in mobile payments and technology in the consumer space is expected to find its footing commercially as well. The \$400 billion U.S. small business card market will continue to walk that fine line between consumer and commercial with the potential for additional regulatory cardholder protections. Moreover, commercial cards will benefit from increased penetration by companies seeking to further reduce costs.

Scope

Commercial Payment Cards: The U.S. and Global Markets and Trends, 7th Edition presents data on and analysis of the Global and U.S. market for commercial payment cards and the U.S. market for commercial electronic payments. The report presents the size and growth of the market and related key metrics within the broader payment card arena. Included are discussions of the various card associations or networks, commercial payment card types, trends and factors affecting their growth, and a focused analysis of commercial card consumer demographics and preferences. In addition, major card brands and issuers are profiled with recent activity.

All new for this report edition is a look at the estimated \$21 trillion U.S. commercial ACH market. In addition, card volume data are presented by product category (small business, commercial) and by region (Global, U.S., International). Also new is commercial card volume product segmentation (corporate, fleet, purchasing, and prepaid) for the United States.
