Abstracts

This report is a catalog of current and future AMI and smart meter deployments in the U.S. Volume I contains information on Demand Response (DR) programs being implemented, summary and detailed profiles of selected utilities (these include status of smart meter deployments and plans, number of residential customers covered, and the types of meters and technologies being implemented) and includes a discussion on the topic of deregulation. Detailed data are provided in a separate Excel file for more than 2,400 utilities for review and analysis.

"Concerns about the environment, rising costs of energy, depreciating infrastructure components, and economic pressures are driving changes in the utility industry." said Bill Ablondi, director, home systems research. "States and the federal government view the implementation of smart metering technology and energy management programs as a means to meet the growing need for energy without building new power plants. This report provides our updated forecast of these deployments plus a comprehensive snapshot of the current status and activities of utilities throughout the U.S. and provides data on the capabilities they are enabling and the technologies they are implementing."
