Abstracts

This industry report examines smart grid and residential energy management activities in key regions around the world. The report focuses on the key drivers and inhibitors to smart meter deployments in Europe, Brazil, Canada, and Asia.

The implementation of smart grids around the globe has increased exponentially over the past several years. Deployments in many countries are well ahead of the U.S. and provide valuable lessons to utilities, solution providers, and government entities. Although cultural, regulatory, and industrial particulars for each market vary widely, experiences of the various participants in can help guide those seeking success in the U.S. This report examines the factors driving adoption of smart grid infrastructures in these regions including the activities of utilities and their partners.

“The implementation of smart meters throughout the world has grown exponentially over the past couple of years,” said Pietro Macchiarella, Research Analyst. “The development of technology, rising demand for energy, and regulatory standards all play a role in pushing upgrades of the world’s antiquated electric power grids. In this report we provide information on the companies and organizations impacting the deployment of smart grid architectures in key countries around the globe.”
