Abstracts

This report provides an overview of the emergence of IP-based home security solutions. It analyzes the evolution taking place in the professional security monitoring market and offers insight on the impact of new monitoring systems on the traditional security business model. The report profiles key participants developing products and services and the channels being utilized, supported with market forecasts and recommendations.

"Security companies and service providers understand that widespread availability of broadband Internet connectivity is disrupting their traditional business model," said Parks Associates. "We believe Internet-connected security systems will expand the residential security market by providing additional capabilities and benefits to a broader range of consumers than those who are typical subscribers."
