Abstracts

This report examines the market for networked medical devices for personal/home use. It also analyzes the technology trends that impact the design and use cases of these devices in meeting consumer DIY care needs.

"With networking technology integrating into devices that capture patient vital signs and help diagnose health conditions, health professionals are able to extend the point of care to locations more convenient to patients, most notably the household," said Harry Wang, Director, Health and Mobile Product Research, Parks Associates. "Networked medical devices enable patient-centered care and drive care cost away from the most expensive premises."
