Market Outline: Acaricides Market

Acaricides are the chemical substances that are used to kill the arachnids majorly ticks and mites. Most commonly used arachnids include organophosphates, chlorinated organic compounds, arsenical, synthetic pyrethroids, and carbamates. Increase in the infestation from ticks, mites, and pests are causing health hazards to human which leads to rise in disease burden. These acaricides have ability to control the ticks on livestock and agricultural pests. These can be applied by various methods such as spray, dipping vat, and host of application. Acaricides also used in the animal husbandry to prevent mange, scab, demodicosis, and scabies caused by mites and ticks.
