## Abstracts

Autoimmune disorders occur when a person's immune system attacks his/her own body; and for detecting these disorders and prescribing required treatments, various laboratory tests are performed. Increasing healthcare expenditure, rapidly rising demand for autoimmune disease diagnostics and various ongoing technological advancements leading to the advent of innovative diagnostic procedures are some of the major factors anticipated to drive the United States autoimmune disorders diagnostics market over the next five years. Furthermore, growing disease burden of various autoimmune disorders, especially Rheumatoid Arthritis, Type 1 Diabetes, Multiple Sclerosis, Systemic Lupus Erythematosus (SLE), Inflammatory Bowel Disease (IBD), Psoriasis and Autoimmune Thyroiditis, is expected to boost the US autoimmune disorders diagnostics market through 2020.
