Sodium Percarbonate Market Summary

Introduction

Sodium Percarbonate ($\text{Na}_2\text{H}_2\text{CO}_4$, CAS 15630-89-4), also known as sodium carbonate peroxide or solid hydrogen peroxide, represents an environmentally friendly oxidizing agent widely utilized across cleaning and bleaching applications. This compound exists as a white, free-flowing crystalline powder formed as an adduct of sodium carbonate and hydrogen peroxide, releasing active oxygen upon dissolution in water. Sodium Percarbonate functions by decomposing into sodium carbonate and hydrogen peroxide in aqueous solutions, providing powerful oxidizing action for stain removal and bleaching while leaving only environmentally benign residues of sodium carbonate, water, and oxygen. Primary applications encompass heavy-duty laundry detergents representing the dominant market segment where Sodium Percarbonate provides bleaching action and stain removal in powder and tablet formulations, fabric bleaches offering standalone oxygen bleaching products for whitening and stain treatment, carpet cleaners utilizing oxygen-releasing chemistry for deep cleaning without residue concerns, wood-deck bleaches serving outdoor cleaning and restoration applications, algaecides and fungicides providing antimicrobial action through oxidizing properties, and cosmetics where controlled oxygen release supports specific formulation requirements.

Market Size and Growth Forecast

The global market for Sodium Percarbonate is projected to reach 580-620 million USD by 2026, with an estimated compound annual growth rate of 5.0%-6.0% through 2031.

Market development benefits from growing consumer preference for environmentally responsible cleaning products, Sodium Percarbonate's oxygen-based chemistry generating no chlorine or toxic residues, increasing adoption in concentrated and compact detergent formulations where active oxygen provides efficient bleaching in reduced volumes, and expanding applications beyond traditional laundry into specialty cleaning and industrial uses. China represents the dominant global production center, accounting for over 60% of worldwide capacity in 2025, benefiting from established soda ash and hydrogen peroxide manufacturing infrastructure, cost-competitive production economics, and proximity to major detergent manufacturing markets.

Regional Market Analysis

Asia Pacific demonstrates robust market growth with estimated regional expansion rates of 5.5%-7.0%, driven by concentrated detergent manufacturing capabilities, expanding middle-class populations increasing laundry product consumption, and growing emphasis on modern cleaning products in developing economies. China maintains overwhelming production dominance, with major manufacturers including Shandong Haihua Group (first phase of 100,000 tonnes per year capacity commissioned in 2024), Hongye Holding Group (150,000 tonnes per year capacity), and Zhejiang Jiehua New Materials (9,000 tonnes per year) representing substantial infrastructure. Chinese production serves both massive domestic consumption through local detergent manufacturers and significant export volumes supplying international markets. The country benefits from vertical integration with soda ash and hydrogen peroxide feedstocks, established technical expertise in peroxide chemistry, and economies of scale supporting cost-competitive global supply. India demonstrates growing consumption driven by expanding packaged detergent market, increasing penetration of premium laundry products in urban and semi-urban markets, and rising consumer awareness regarding effective stain removal and fabric care. Japan maintains high-quality production serving domestic premium detergent segments and specialty applications requiring stringent purity and stability specifications.

North America shows growth rates of 4.5%-5.5%, with the United States representing substantial consumption through major detergent manufacturers utilizing Sodium Percarbonate in powder detergent formulations, oxygen bleach products, and specialty cleaning applications. American market dynamics reflect established consumer acceptance of oxygen bleach chemistry, growing preference for chlorine-free bleaching alternatives perceived as safer and more environmentally responsible, and increasing adoption in concentrated detergent formats where Sodium Percarbonate provides

efficient bleaching without excessive bulk. The region maintains limited domestic production, with most consumption served through imports primarily from Asian manufacturing sources, though some specialty production serves niche applications requiring specific quality attributes or supply security.

Europe exhibits growth rates of 4.0%-5.5%, with Germany, France, and other major economies maintaining significant Sodium Percarbonate consumption through well-established detergent industries and strong consumer preference for oxygen-based bleaching products. European market demonstrates particular emphasis on environmental sustainability, biodegradable cleaning products, and reduced chemical residues aligning well with Sodium Percarbonate's environmental profile. The region benefits from early adoption of oxygen bleach technology, extensive consumer education regarding product benefits, and regulatory frameworks supporting environmentally preferable cleaning chemistries. European consumption patterns favor premium powder detergents, standalone oxygen bleach products for laundry applications, and specialty cleaners for various household and commercial uses. Some European production capacity exists, with companies including OCI and historically Solvay (business acquired by Latour Capital in 2020-2021 forming Kandelium) maintaining operations, though significant import volumes from Asia supplement regional production.

South America demonstrates modest growth potential of 3.5%-4.5%, with Brazil representing the primary market serving growing packaged detergent consumption and increasing adoption of modern laundry products. Regional consumption benefits from rising middle-class populations demanding effective cleaning products, expanding retail distribution of premium detergent brands, and growing awareness regarding stain removal and fabric care. However, market penetration remains lower than developed regions, with traditional liquid detergents and bar soaps maintaining significant market shares limiting oxygen bleach adoption. Economic conditions affecting discretionary spending and detergent affordability influence market development pace.

The Middle East and Africa region shows growth rates of 3.0%-4.0%, with limited domestic production and growing consumption primarily in urban centers adopting modern detergent products. Market development faces constraints from limited manufacturing infrastructure, price sensitivity in many markets, and traditional cleaning practices in certain regions. However, expanding urban populations, growing retail infrastructure, and increasing penetration of international detergent brands support gradual market growth particularly in major metropolitan areas and more developed economies within the region.

Application Analysis

Heavy-duty Laundry Detergents represent the dominant application segment, accounting for the vast majority of global Sodium Percarbonate consumption. This critical usage provides in-wash bleaching action removing stains and maintaining fabric whiteness without separate bleach addition, serves powder detergent formulations where dry chemistry enables long-term stability, and supports concentrated detergent formats where high active content delivers performance in reduced doses. Sodium Percarbonate functions effectively across various water temperatures, though performance improves in warm to hot water where peroxide generation accelerates, and remains compatible with diverse detergent ingredients including surfactants, builders, and enzymes enabling comprehensive cleaning systems. The segment benefits from continuing innovation in powder detergent technology, growing consumer demand for effective stain removal, and increasing adoption of concentrated formats reducing packaging and transportation environmental impacts. Major detergent manufacturers globally incorporate Sodium Percarbonate into premium powder formulations, with product positioning emphasizing superior whitening, stain removal capabilities, and oxygen-based chemistry perceived as modern and effective.

Fabric Bleaches constitute an important standalone application segment where Sodium Percarbonate provides dedicated oxygen bleaching products for laundry whitening and stain treatment. This segment serves consumers seeking supplemental bleaching beyond detergent formulations, particular stain treatment requiring concentrated oxygen chemistry, and color-safe bleaching alternatives to chlorine bleach protecting colored fabrics. Products typically deliver in powder or tablet formats enabling controlled dosing and long-term stability, with usage instructions emphasizing dissolving in water before fabric addition ensuring uniform distribution and optimal performance. The application benefits from consumer awareness regarding oxygen bleach safety advantages over chlorine alternatives, growing market for color-safe bleaching options, and product innovation in convenient formats including pre-measured tablets and combination products.

Carpet Cleaners represent a specialty application segment where Sodium Percarbonate provides deep-cleaning oxygen chemistry for carpet maintenance and stain removal. The segment serves both consumer carpet cleaning products for home use and professional formulations for commercial carpet care services. Oxygen-releasing action provides stain removal and odor reduction without leaving chemical residues potentially damaging carpets or causing re-soiling issues, while chemistry compatibility with carpet

fibers makes Sodium Percarbonate suitable for various carpet types. Application development emphasizes effective stain penetration, controlled oxygen release optimizing cleaning without fiber damage, and formulation stability ensuring product shelf life and handling convenience.

Wood-deck Bleaches serve outdoor cleaning and restoration applications where Sodium Percarbonate removes weathering stains, mildew discoloration, and organic deposits from wood surfaces. The segment benefits from environmental safety enabling outdoor use without toxic residue concerns, effective oxygen bleaching restoring wood appearance, and compatibility with subsequent staining or sealing treatments. Consumer and professional products address deck maintenance, fence cleaning, and outdoor wood furniture restoration markets.

Algaecides and Fungicides utilize Sodium Percarbonate's oxidizing properties for antimicrobial action in various applications including pool treatments, pond maintenance, and agricultural uses. The segment demonstrates specialized technical requirements ensuring effective microbial control while maintaining safety for intended environments. Cosmetics represent a niche but growing application where controlled oxygen release serves teeth whitening formulations, skin care treatments utilizing gentle exfoliation, and hair coloring products requiring oxidizing chemistry, with ultra-high purity and stringent safety validation ensuring cosmetic-grade suitability.

Industry Value Chain Analysis

The Sodium Percarbonate industry value chain begins with two primary feedstocks: sodium carbonate and hydrogen peroxide, requiring reliable sourcing from established chemical manufacturers. Sodium carbonate production through Solvay process or natural trona mining provides one essential component, while hydrogen peroxide synthesis through anthraquinone auto-oxidation process supplies the oxidizing component. Manufacturing operations employ controlled crystallization processes where sodium carbonate and hydrogen peroxide solutions undergo precise mixing and crystallization conditions producing the 2:3 adduct structure characteristic of Sodium Percarbonate. Process parameters including temperature profiles, concentration ratios, mixing intensity, and crystallization kinetics critically influence final product properties encompassing particle size distribution, bulk density, active oxygen content, and stability characteristics.

Advanced manufacturing incorporates coating technologies applying thin protective layers to Sodium Percarbonate particles preventing premature decomposition during

storage and handling while enabling controlled release during application use. Coating materials typically include sodium metaborate, sodium silicate, or organic compounds creating moisture barriers and stabilization effects extending product shelf life and maintaining consistent active oxygen content. Coating process optimization represents critical technical expertise differentiating product quality and performance characteristics.

Quality control encompasses comprehensive analytical testing verifying active oxygen content typically targeting 13-15% available oxygen, moisture content below critical thresholds preventing stability issues, particle size distribution matching customer specifications for handling and dissolution properties, and stability testing under various storage conditions ensuring adequate shelf life. Food-contact and cosmetic applications require additional purity verification and safety documentation ensuring regulatory compliance.

Distribution channels primarily involve direct sales to major detergent manufacturers requiring bulk quantities with consistent quality specifications and technical support for formulation optimization, specialty chemical distributors serving smaller cleaning product formulators and industrial customers, and regional importers supplying local markets from major production centers. Logistics considerations include moisture protection preventing product degradation during storage and transport, proper packaging maintaining stability, and safety protocols addressing oxidizing material handling requirements. Technical service support assists customers with formulation development, stability testing, dosage optimization, and application troubleshooting ensuring successful product performance.

The value chain demonstrates close collaboration between Sodium Percarbonate manufacturers and detergent formulators optimizing product specifications for specific applications, developing new formulation technologies incorporating oxygen bleach chemistry, and ensuring quality consistency supporting branded product performance claims.

Key Market Players

Solvay historically operated significant Sodium Percarbonate production but divested its sodium percarbonate business in Germany to Latour Capital in late 2020/early 2021 as part of portfolio rationalization. This divestiture led to the creation of Kandelium in 2021, which now operates the former Solvay assets serving European and international markets with established technical expertise and customer relationships.

Evonik Industries AG maintains Sodium Percarbonate production capabilities serving European and global markets through specialty chemical operations. The company emphasizes technical innovation in peroxide chemistry and coating technologies supporting high-performance products for demanding applications.

OCI Alabama LLC operates production facilities in the United States providing domestic supply serving North American detergent manufacturers and reducing dependence on imported materials. The facility benefits from integrated soda ash operations and established hydrogen peroxide sourcing supporting cost-competitive production.

Kandelium represents the entity formed through Latour Capital's acquisition of Solvay's sodium percarbonate business in Germany, continuing operations at established facilities with technical expertise and market presence in Europe and internationally.

Akkim Kimya San. ve Tic. A.S. functions as a Turkish chemical manufacturer with Sodium Percarbonate production capabilities serving regional markets and export customers through diversified chemical product portfolios.

CHCIW operates as a European specialty chemical producer with capabilities in peroxide chemistry including Sodium Percarbonate manufacturing.

ADEKA Corporation and Hodogaya Chemical Co. Ltd. represent Japanese manufacturers with technical expertise in specialty chemicals including Sodium Percarbonate production serving domestic Japanese market and regional Asian customers.

Chinese manufacturers including Zhejiang Jinke Household Chemical Materials, Jiangxi Boholy Chemical, Hongye Holding Group (150,000 tonnes per year capacity), Zhejiang Jiehua New Materials (9,000 tonnes per year), and Shandong Haihua Group (100,000 tonnes per year first phase commissioned in 2024) represent massive production infrastructure supporting China's dominant global position. These companies benefit from vertical integration, economies of scale, and established export networks supplying international markets.

Market Opportunities and Challenges

Opportunities

Environmental Sustainability Positioning: Growing global emphasis on environmentally responsible products creates substantial opportunities for Sodium Percarbonate positioned as eco-friendly alternative to chlorine bleach and other harsh chemical oxidizers. The compound's decomposition into only sodium carbonate, water, and oxygen eliminates toxic residues, reduces water pollution concerns, and aligns with consumer preferences for green chemistry solutions. Manufacturers emphasizing environmental benefits, obtaining eco-label certifications, and communicating sustainability advantages can access premium market segments and support detergent brands differentiating through environmental positioning. Regulatory trends favoring environmentally preferable chemistries, potential restrictions on chlorine-based products, and corporate sustainability commitments among major detergent companies create favorable market dynamics for oxygen-based bleaching technologies.

Concentrated Detergent Format Growth: Increasing adoption of concentrated and compact detergent formats driven by packaging reduction, transportation efficiency, and consumer convenience creates opportunities for Sodium Percarbonate as an efficient active ingredient delivering performance in reduced volumes. Concentrated formulations require high-activity components where Sodium Percarbonate's 13-15% available oxygen provides substantial bleaching power in compact product formats. Innovation in unit-dose formats including pods and tablets incorporates Sodium Percarbonate for in-wash bleaching without liquid instability issues, supporting format diversification and premium product development. Manufacturers developing specialized grades optimized for concentrated applications, providing technical support for new format development, and collaborating with detergent innovators can capture growth aligned with market format evolution.

Emerging Applications and Market Diversification: Beyond traditional laundry applications, Sodium Percarbonate demonstrates expanding opportunities in diverse cleaning and treatment applications. Industrial and institutional cleaning markets utilize oxygen chemistry for sanitization, stain removal, and odor control in healthcare facilities, food processing operations, and commercial laundries. Agricultural applications including greenhouse disinfection, irrigation system cleaning, and organic farming-compatible treatments represent developing opportunities. Water treatment applications for algae control and organic contaminant oxidation create specialty market segments. Companies developing application-specific formulations, establishing technical expertise in non-detergent applications, and building customer relationships in specialty markets

can diversify beyond commodity detergent supply.

Regional Production Development and Supply Security: Concentrated production in China creates opportunities for regional manufacturing development in other markets addressing supply security concerns, reducing logistics costs and lead times, and providing alternative sources during trade disruptions. Companies establishing production facilities in North America, Europe, or other regions with significant consumption can serve local markets while potentially accessing customers preferring regional supply relationships. However, successful development requires competitive cost positions, technical capability matching Chinese quality standards, and market relationships offsetting China's scale advantages.

Challenges

Price Competition and Chinese Production Dominance: China's overwhelming production capacity exceeding 60% of global supply creates intense pricing competition through economies of scale and integrated feedstock advantages. Chinese manufacturers' cost positions enable aggressive pricing in international markets, creating margin pressures for producers in higher-cost regions and limiting profitability for commodity-grade products. International markets served substantially by Chinese imports face pricing dynamics where supply-demand balances significantly influence market conditions. Producers must differentiate through service quality, technical support, specialty product offerings, or supply reliability, while managing cost structures competing with Chinese baseline pricing. Market cyclicalities aligned with detergent industry economics creates demand fluctuations requiring operational flexibility.

Product Stability and Quality Management: Sodium Percarbonate demonstrates inherent stability challenges due to peroxide chemistry sensitivity to moisture, temperature, and contamination. Maintaining product quality during manufacturing, storage, and distribution requires sophisticated process control, protective coating technologies, and proper handling protocols. Moisture ingress causes premature decomposition reducing active oxygen content and potentially creating handling hazards through oxygen generation. High temperature exposure accelerates decomposition compromising product performance and shelf life. Manufacturers must invest in advanced coating systems, implement rigorous quality assurance, maintain controlled storage environments, and

ensure customer education regarding proper handling. Quality variations create customer complaints, product performance issues, and potential safety concerns requiring comprehensive technical support and problem resolution capabilities.

Raw Material Cost Volatility and Feedstock Dependence: Sodium Percarbonate production requires both sodium carbonate and hydrogen peroxide feedstocks subject to price fluctuations based on underlying markets and production economics. Soda ash pricing demonstrates cyclical alignment with glass industry demand, supply-demand dynamics, and energy costs affecting production. Hydrogen peroxide costs depend on feedstock prices for production inputs, energy intensity of manufacturing, and market demand across diverse applications competing for supply. Feedstock cost volatility creates input cost uncertainty and margin pressures particularly when product pricing lags input cost increases. Manufacturers benefit from vertical integration securing feedstock supply and capturing value chain margins, though independent producers must manage procurement strategies, maintain supplier relationships, and potentially hold strategic inventories buffering cost fluctuations.

Regulatory Compliance and Safety Requirements: Despite environmental advantages, Sodium Percarbonate faces regulatory requirements as an oxidizing substance with potential hazards requiring proper classification, labeling, and handling protocols. Transportation regulations classify the material requiring compliance with hazardous goods shipping requirements, proper documentation, and approved packaging. Storage facilities must implement safety measures preventing moisture exposure, temperature extremes, and contamination risks. Customer applications in detergents and cleaning products require safety assessments, labeling compliance, and proper usage instructions ensuring consumer protection. International trade involves navigating diverse regulatory frameworks across markets, maintaining comprehensive product documentation, and potentially conducting region-specific safety evaluations. Compliance requirements create operational complexity and cost burdens particularly for smaller producers lacking dedicated regulatory expertise.

I would like to order

Product name: Sodium Nitrite Global Market Insights 2026, Analysis and Forecast to 2031

Product link: <https://marketpublishers.com/r/S85CEE156B04EN.html>

Price: US\$ 3,200.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:

info@marketpublishers.com

Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page <https://marketpublishers.com/r/S85CEE156B04EN.html>
