Abstracts

Bismuth is a white, crystalline, brittle metal that has a slightly pinkish tinge. One of the notable characteristics of the elements is its diamagnetism, which is the strongest among all metals. The other key features include high electrical resistance and extremely low thermal conductivity. Bismite and bismuthimite are the two major ores of bismuth. Bismuth is majorly found in Mexico, Japan, Bolivia, Peru, and Canada. Bismuth, in elemental, alloyed, or chemical compound forms, has numerous applications; for instance, bismuth alloy is used for fire detection & suppression system safety device as well as in solder, cosmetics, medicines, and medical procedures. In the recent years, lead has been substituted by bismuth, owing to the high toxicity of lead. The global bismuth market was valued at \$210 million in 2017.

The applications covered in the study include metallurgical additives, pharmaceuticals & chemicals, fusible alloys, solders & ammo, and others. Country wise, the market is analyzed across China, Mexico, Canada, Bolivia, Russia, Vietnam, and others.
