CANCER IMMUNOTHERAPY MARKET - OVERALL INDUSTRY ANALYSIS

The global cancer immunotherapy market was valued at \$57,256.2 million in 2017 and is expected to reach \$166,714.5 million by 2025, registering a CAGR of 14.42% during the period, 2018-2025. Cancer is a concerning health issue globally and patients succumb to the disease every single day. Among the various modes of treatment, using the immune system to treat cancer or cancer immunotherapy has gained widespread importance in the recent years. Cancer immunotherapy deals with the interaction between cancer cells and the immune system. It harnesses certain components of the immune system to fight cancer. The treatment can be done in several ways. Some of them involve stimulating the body's immune system to work harder to attack cancer cells while some others involve providing the immune system with man-made immune system proteins to fight cancer cells. The various types of immunotherapy used to treat cancer include monoclonal antibodies, immune checkpoint inhibitors, cancer vaccines, and other immunotherapies.

CANCER IMMUNOTHERAPY MARKET DRIVERS AND RESTRAINTS

The cancer immunotherapy market is a fiercely competitive one with several big players operating in the field. The report says that the rise in funding from various government and private organizations for carrying out R&D activities for cancer immunotherapy, growing incidence of cancer globally, rise in approvals for the clinical trials and the growing acceptance of cancer immunotherapy are driving the demand of the industry. On the other hand, the high cost associated with cancer immunotherapy restrains the industry growth.
