### Garage Door Openers Market Overview:

The global garage door openers market is expected to reach \$1,740.26 million in 2025, from \$1,081.61 million in 2016, growing at a CAGR of 5.49% from 2017 to 2025. The garage door openers constitute mechanized motors attached to a drive system of chain, belt screw, direct or jackshaft and others that facilitate opening and closing of garage doors.

Factors such as rising consciousness toward garage security and growing propensity of individuals to spend on garage door and its accessories is expected to drive the market growth. Moreover, the low cost of maintenance along with longer product life cycle is also projected to propel the market growth in the coming years. In addition, the increase in scope of garage use for other activities such as entertainment, storing tools, off-season accessories, and other activities, is projected to drive the privacy and security concerns of garage safety, which subsequently fuels the demand for garage door openers during the forecast period. However, rise in number of high rise buildings, especially among developing economies and popularity of residential complexes is projected to negatively influence the market and restrict its growth in the coming years.

Based on type, the global garage door openers market is segmented as chain drive, belt drive, screw drive, and others. Moreover, based on operation, the market is broadly classified into manual and automated operated garage door openers. Furthermore, based on end user, the market is bifurcated into residential and commercial end-users. Based on region, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
