Abstracts

Military communication is the application of information-sharing between the command base and deployed forces present in the active war zone, or troops conducting border patrols. The main objective of a military communication system is to facilitate the message transmission through a secure and low visibility path, safeguarding the critical commands and hiding the presence of active troops in the threat-prone areas.

Advanced communication systems such as radios, satellite communication (SATCOM), cryptographic, and control devices are used in all defense forces such as land, air, sea, and underwater.

The global military communication market is segmented based on application, component, deployed platform, and geography. Based on the application, the market is divided into command & control, movement & maneuver, real-time awareness, and others. Component type includes radio, SATCOM, intercom networks, and software suits. Deployment platform is further sub-divided into airborne, manpack/vehicular (Land), navy fleet, and underwater. Geographically, the market is segmented into North America, Europe, Asia-Pacific, and LAMEA.

MARKET DYNAMICS:
