It is a key tool for the energy industry, which provides tax benefits, rebates, and in subsidizing product development in the generation of renewable energy. These are also known as green certificates, renewable certificates, green tags, and tradable renewable certificates. The REC is an environmental attribute analogous with the generation of one megawatt hour of green energy. Renewable energy certificates are classified based on renewable energy sources, such as solar energy, biomass energy, wind energy, hydroelectric energy, and geothermal energy.

The global renewable energy certificates market is segmented based on the type and geography. Based on the type, the market is bifurcated as solar energy, biomass energy, wind energy, hydroelectric energy, geothermal energy, and others. Geographic breakdown and deep analysis of each of the aforesaid segments have resulted in the following regions: North America, Europe, Asia-Pacific, and LAMEA.
