Abstracts

Software-Defined Perimeter (SDP) is a security framework designed to provide on-demand and dynamically provisioned functionality network, thereby offering benefits of flexibility, scalability, and increased security as necessary. SDP creates no-trust network architecture wherein authentication and encryption is performed before the data packets are processed by the endpoints.

The market is segmented on the basis of product type, component, mode of deployment, size of the organization, end-user, and geography. Based on the type of product, the market is divided into gateways, controllers, and endpoints. The component segment is divided into solution and services. SDP market by solution is further segregated into security software, control automation software, performance management solution, and security compliance and policy management solutions. The service market is further subcategorized into support and maintenance service, consultation, and integration & testing services. Small & medium enterprises and large enterprises have been considered under market by organization size. The SDP solutions have been deployed on-premises and on-cloud. The end-user segment includes telecom service providers, cloud service providers, and enterprises including healthcare, government, education, BFSI, defense, and others. Geographically, the global market is analyzed across North America, Europe, Asia-Pacific and LAMEA.

MARKET DYNAMICS:

Drivers:

Increase in the need to minimize human intervention and

enhance synchronization between security policies and computing environment in enterprises
