Sodium bicarbonate is a member of a class of medicines known as antacids, which is administered intravenously to increase plasma bicarbonate concentration, buffer excess hydrogen ions, and increase blood pH. This chemical is widely applicable in the medical industry for treatment of several conditions such as metabolic acidosis, cardiac arrest, and renal indications. The administration of sodium bicarbonate in the body helps to increase the plasma HCO_3 concentration and restore the plasma pH within the normal range. Thus, it is widely used to normalize pH by neutralizing excessive stomach acids in patients suffering from acidosis.
