Machine vision (MV) is the technology and methods used to provide imaging-based automatic inspection and analysis for such applications as automatic inspection, process control, and robot guidance, usually in industry. Machine vision refers to many technologies, software and hardware products, integrated systems, actions, methods and expertise. 2D Machine Vision Technology provides results based on the characteristics of contrast in grayscale or color images. 2D is suitable for missing / presence detection, discrete object analysis, pattern alignment, bar code and optical character recognition, OCR, and various 2D geometric analysis based on edge detection. Used for fitting lines, ARCS, circles and their relative distance, angle, intersection points, etc.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
