Abstracts

Machine vision (MV) is the technology and methods used to provide imaging-based automatic inspection and analysis for such applications as automatic inspection, process control, and robot guidance, usually in industry. Machine vision refers to many technologies, software and hardware products, integrated systems, actions, methods, and expertise. 2D Machine Vision Technology provides results based on the characteristics of contrast in grayscale or color images. 2D is suitable for missing / presence detection, discrete object analysis, pattern alignment, bar code and optical character recognition, OCR, and various 2D geometric analysis based on edge detection. Used for fitting lines, ARCS, circles and their relative distance, angle, intersection points, etc. 3D machine vision is most commonly used for the precise three-dimensional inspection and measurement of complex 3D free formed surfaces. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the 2D and 3D Machine Vision Systems market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
