## Abstracts

3D Printing, also known as additive manufacturing, is the process of adding successive layers of raw material to create an object that forms a 3D file. In medical terms, 3D printed medical implants allow surgeons to perform surgery by implanting biological objects, thereby reducing the risks involved in the procedure, reducing exposure to anesthesia and reducing the risk of infection.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
