Abstracts

Companies use accounts payable (AP) automation software to manage large volumes of invoices and financial transactions between a company and its suppliers. While most accounting solutions include AP features, many of them do not provide functionality to manage complex AP processes. Companies choose AP automation software to reduce manual work and avoid human errors. AP automation software is used by accountants and by members of the accounting department responsible for accounts payable. It can also be used by managers and executives to monitor AP processing activities. This type of software simplifies complex AP activities and helps accountants manage large volumes of supplier invoices. AP automation improves the efficiency and the accuracy of the AP department and helps with other accounting activities such as financial closing. AP automation solutions can be delivered as standalone products or as a part of accounting suites that also include AR automation, billing and invoicing, and payment processing features.
