Abstracts

Accumulator stations are intended for use in hydraulic systems and consist of diaphragm, piston or bladder-type accumulator with shut-off block on mounting elements.

Accumulator stations are usually ready for operation, complete with all the necessary valve controls, ball valves and safety equipment.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Accumulator Stations market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
