Abstracts

This report focus on Active RFID Readers market. Active RFID readers use battery powered RFID tags that do not require energy from the readers for sending signals. Due to the fact that the active RFID tags have their own source of power and transmitter, it enables the tag to broadcast signals.

Active RFID systems are typically used for large applications, such as railway cars, reusable containers, and other objects that need to be monitored over long distances. In most cases, an active RFID system will operate on the ultra-high frequency (UHF) band, which offers a range of up to 100 meters.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Active RFID Readers market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Active RFID Readers industry.
