Additive Manufacturing (AM) , also known as 3D printing, combines computer-aided design, material processing and molding techniques, and is based on digital model files by means of software and numerical control system, special metal material, nonmetal material and medical biological material are piled up layer by layer according to extrusion, sintering, melting, light curing, spraying, and so on. It is a 'bottom-up' manufacturing process that accumulates material from scratch, as opposed to the traditional process of removing, cutting, and assembling raw materials. This makes it possible to manufacture complex structural parts which were restricted by traditional manufacturing methods.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Additive Manufacturing Materials market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
