Production workers in the aerospace industry perform specialized work due to the complexity of the products they work on. Most parts are made by machine tool operators, but complicated parts and parts that are needed in numbers too small to mass-produce are made by machinists.

Increasing demand for commercial aircraft owing to the rise in fleet replacement to retire aging aircrafts with new-generation, lightweight, and fuel-efficient aircrafts is anticipated to drive the growth.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Aerospace Parts Manufacturing market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
