Abstracts

Agriculture robots & drones are the advanced machinery used in the farming so as to improve the efficiency of the work. During last few years, there is a significant increase in the use of the advanced technological equipment in commercial use for organic farming. They are used in crop rows to identify the weeds and remove the unwanted plants and insects. Next generation robotic implements are in the initial stage of commercial deployment. Advancement in robotics and development in the drone systems has led to the introduction of the advanced agricultural robots which will minimize the labor cost. It is expected that in near future this technology will completely transform the agricultural sector.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
