Abstracts

Air-cooled chiller is one of the chillers. The air-cooled chiller cools the water to a certain temperature through the compressor of the chiller to strengthen the cooling mold or machine. It is used as a single machine. The cooling device is a built-in fan. There are three main interconnected systems: the refrigerant cycle system, the water cycle system, and the electrical automation system.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
